

MYN Command Center

Capabilities & Stack — Internal Operations Reference

My Yoga Network — AI-operated business infrastructure

Document	Capabilities & Stack snapshot
Audience	Internal — operators & agents
Generated	2026-06-15
Source of truth	capabilities/registry.json + CLAUDE.md
Repo	github.com/Ram-Bhakt222/myn-command-center

This document is a point-in-time inventory of the systems that run My Yoga Network: the dashboard suite published in this repo, the operating-system core, the agent orchestration plane, integrations, content pipelines, and the scheduled jobs that keep it all moving. It mirrors the canonical machine-readable registry (capabilities/registry.json) consumed by the MYN Cockpit Mission Control page.

1 System Overview

My Yoga Network runs as a layered, AI-operated stack. A Flask control tower (the **MYN Cockpit**) sits over a set of Docker stacks and orchestration services; a newsroom of named agents and the **AgentField** plane execute work; **Hermes** supplies skills, session memory, and delegation. Structured data lives in Supabase, vector memory in Qdrant, and scraping runs through Apify. A suite of static HTML dashboards (this repo) is the human-facing window into all of it.

Architecture at a glance

Layer	What runs there
Control plane	MYN Cockpit (Flask, :8787) — bootstrap pipeline, Mission Control, Cron Mission Control, live analytics, opportunities scanner
Orchestration	AgentField (Docker), Hermes (skills/memory/delegation), Discourse agent newsroom (:8800, 23 personas)
Data & memory	Supabase (structured), Qdrant (:6333 vectors), Langfuse (:3005 LLM traces), nightly Postgres+Qdrant backups
Integrations / MCP	GHL MCP (node, 576 endpoints), GA4/GSC MCP, WhatsApp MCP, DigitalOcean MCP, n8n cloud engine
Content & video	AI video gen (DANCE), Remotion, content-engine, Whisper transcription container
Surfaces	myn.org (members), myn.com (public), Marketing Agent KB, this Command Center dashboard repo

Maintenance rule: when a capability ships, moves, or is retired, `capabilities/registry.json` is updated first (Cockpit and the Cowork artifact read it), then `REGISTRY.md` and this document are mirrored.

2 Dashboard Suite (this repo)

Static HTML dashboards — open directly in a browser, or via the published docs/ GitHub Pages mirror. The Analytics view is now served live from the Cockpit rather than a standalone server.

File	Type	Purpose
index.html	Hub	Landing page + navigation to every dashboard
master-directory.html	Hub	Directory of all system components
analytics-dashboard.html	Ops	GA4 + Search Console, events/PMF, Ads, GHL CRM, operations
agent-control-plane.html	Ops	Agents across departments, budget tracking, operational tabs
supabase-dashboard.html	Ops	Database health, table stats, query monitoring
lead-gen-dashboard.html	Ops	Lead pipeline + outreach status
review-queue.html	Workflow	Approval queue for agent outputs needing human review
skills-inventory.html	Workflow	All Claude skills + stack capabilities
architecture-dashboard.html	Strategy	System architecture reference — tri-system map
business-economics-dashboard.html	Strategy	PMF economics, division P&L, revenue modeling
team-handoff-dashboard.html	Strategy	Team coordination, handoffs, task routing
divisions-index.html + division-*.html	Strategy	9 division briefs (Aperture, Atlas, Cadence, Ember, Fulcrum, Harbor, Keystone, Loom, Meridian)
hotel-activities-dashboard.html	Vertical	Hotel & resort activities program view
scott-hoffman-knowledge-base.html	Vertical	Account knowledge base
rfp-2627-003-dashboard.html	Vertical	RFP response tracker

Retired: `paperclip-dashboard.html` removed 2026-06-10 (Paperclip service retired — redundant with AgentField + Cockpit + Discourse).

3 Operating System Core

Capability	Where	Notes
MYN Cockpit	Flask service · :8787	Control tower. entry cockpit_server.py, started by schtask 'MYN Cockpit Up'
Bootstrap pipeline	MYN-Cockpit/bootstrap.ps1	Brings up Docker Desktop + all stacks
Host observability	Sysinternals-observability	host_probe.py imported by Cockpit (sibling-relative — keep co-located)
Docker systems	Docker-Systems	Caddy reverse proxy :8888, stack configs
Cron Mission Control	:8787/cron	All schtasks + AgentField jobs, last-run results, pending approvals, exec log
Mission Control	:8787/mission	Registry + draft emails + agent needs/tasks (reads registry.json)
Operating docs	01_operating_system	Includes desktop-docs (consolidated 2026-06-10)

4 Agents & Newsroom

Capability	Where	Notes
AgentField	Docker · myn-agentfield	Orchestration control plane — agents, workflows, scheduler
Hermes	hermes	Skills, session memory, delegation
Discourse newsroom	:8800	23 named personas; scheduled agents via schtasks
Agent needs feed	:8787/api/agents/needs	agent_needs.json served to Cockpit
Opportunity scanner	:8787/opportunities	Daily 7AM PT — Apify Reddit → Haiku scoring → Slack #approvals digest

5 Integrations & MCP

Integration	Status	Notes
GHL MCP (node)	Active · preferred	576 endpoints; Claude Desktop key ghl-2026; external ghl-mcp-2026
GA4 / GSC MCP	Active	Live Google Analytics + Search Console pulls (mcp-ga-gsc OAuth)
WhatsApp MCP	Active	Messaging integration
DigitalOcean MCP	Active*	Cowork connector. *Token needs refresh (401 as of 2026-06-10 eve)
Supabase	Active	Structured data store
Qdrant	Active · :6333	Vector memory (myn-qdrant)
n8n cloud	Active engine	n8n.myyoganetwork.org — 51 workflows / 23 active; live automation engine
GoHighLevel-MCP (docker)	Retired	Duplicate of node ghl-mcp-2026; folder kept as cold fallback
n8n (local)	Retired	Duplicate of cloud n8n; container removed, JSON exports kept
Paperclip	Retired	Redundant with AgentField+Cockpit+Discourse; folder + volumes deleted

6 Content & Video Pipeline

Capability	Notes
AI video gen	DANCE API spec, Network Chronicle story bible + episodes
Remotion renderer	myn-remotion — programmatic video rendering
Content engine / weekly	content-engine, content-weekly, content_drafts
Whisper transcription	whisper-docker container (local, CPU)
MetaClaw	Tooling

7 Data, Analytics & Reliability

Capability	Where	Notes
Live GA4 + GSC analytics	:8787/analytics	Live GA4 Data API + Search Console via mcp-ga-gsc OAuth; 10-min cache
Langfuse	:3005	LLM observability — traces/costs/evals (v3.184.1). TODO: org+keys, instrument agentfield
MYN data layer	MYN-data-layer	Models, experimentation rhythm
AI cost snapshot	external JSON	snapshot-latest.json — read before running expensive AI jobs
Nightly backups	schtask 03:30	pg_dumpall (myn-postgres) + Qdrant snapshot → backups/, 14-day retention
Shared paths module	shared/myn_paths.py	Canonical paths + endpoints — import instead of hardcoding
Smoke test suite	tests/test_smoke.py	Guards registry/services/bootstrap drift; run before config changes

8 Skills & Surfaces

Skills: MYN-Skills (cockpit-ops, discourse-ops, debate, listener), imported-skills (incl. ai-cost-monitor), project skills.

Surface	Role
myn.org	Members / users — unified user experience target
myn.com	Public marketing site (myn.com-main)
Marketing Agent KB	Target audiences + strategy knowledge base
Command Center (this repo)	Operator-facing dashboard suite + capability docs

Generated 2026-06-15 for internal operations use. Re-generate from capabilities/registry.json when the stack changes.
